a8 The EBV-encoded latent membrane protein 1 (LMP1) is consistently expressed in EBV-associated malignancies, and the peptide epitope YLLEMLWRL (SEQ ID NO: 48) derived from LMP1 (LMP1.1) is presented in the context of the HLA class I molecule A2.1. Starting from peripheral blood T cells harvested from HLA A2.1⁺ donors, it was shown that the AAPCs consistently elicit strong stimulation of CTLs with HLA-restricted specific cytotoxic activity against the LMP1.1 peptide.
